

Advanced Mifare Readers From Third Millennium

Third Millennium now offers a range of advanced access control readers to suit all of your Mifare access control requirements. From the TM180 single-gang wall-plate reader, the TM480 classic proximity reader, the TM580 keypad proximity reader or the TM770 intelligent fingerprint reader, you are sure to find the perfect mix of products for your next Mifare project.

The readers are available pre-configured for serial number operation or the more secure sector reading mode. Through our extensive contact with control panel manufacturers worldwide, you can be assured that these readers are compatible with the broadest range of systems available today.

The Third Millennium card format also allows you to store up to two fingerprints on the card, allowing employees to keep sensitive personal data under their own control.

And remember, Third Millennium also offers these great readers equipped with Third Millennium, HID and LEGIC technology.

The TM480 Advanced Mifare Reader
